

Extra Dock Safety Series

xds hydraulic dock leveler models

BLUE GIANT®

Loading Dock Safety, Where You Need it Most

Prevent costly physical injury with the Blue Giant Extra Dock Safety System. The Blue Giant XDS is the only 3-in-1 system that prevents forklift roll-off, overhead door damage, and unscheduled truck departures at the loading dock. The XDS system features our flagship hydraulic I-beam dock leveler with built in door & dock guard. For added safety it can be interlocked with our low profile restraint and highly visible communications package.

Door & Dock Guard

- The raised guard is designed to prevent forklift roll-off when the overhead door is open and no truck is present and to protect overhead doors and tracks from regular impact damage.
- Hydraulically activated, high tensile checker plate safety barrier, towering over 7" (178 mm) above the deck.
- Stops up to 10,000 lb (4,545 kg) rolling loads at 4 mph (6.4 kmh).
- Acts as a pallet stop to guard door panels and tracks from regular impact when the overhead door is closed.
- When the dock leveler is in use the safety guard automatically lies flat or flush with the deck surface allowing smooth, unobstructed flow of traffic during load transfers.

Dock Leveler

- Available in 30,000 lb (13,636 kg) to 80,000 lb (36,364 kg) capacities.
- Heavy-duty I-beam deck construction and exclusive 4" (102 mm) maintained deck tilt prolongs deck life and prevents forklift damage.
- Fully hydraulic operation with 1 HP maintenance-free power pack (not illustrated), designed to provide years of trouble-free use (available in standard single and three phase voltages).
- Independent lip control, efficient use of time & energy.

- 16" (406 mm) long lip (lip is tapered on 7' (2,134 mm) wide models).
- Pivot points fitted with pre-lubricated bushings.
- Terminal block provision for overhead door interlock and audible alarm.
- Two laminated 4.5" x 14" x 10" (114 mm x 356 mm x 254 mm) bumpers.
- Full operating toe guards, safety maintenance strut, and laminated bumpers provide extra safety to personnel and building.
- Traffic light package (Interior and Exterior)

Vehicle Restraint (XDS 3000, 4000 only)

StrongArm™ SVR 303 - XDS 4000 Series

- Switchless intelligent positioning system.
- Keypad over-ride controls.
- MH30.3 approved.
- Zinc plated to reduce corrosion and maintenance.
- Low Profile design to accommodate Air Ride Trailers - (8" above grade - 203 mm).

NEW TL85 - XDS 3000 Series

- Restraining range from 12" - 29" (305 mm - 737 mm) above grade.
- Restraining strength of 35,000 lbs (15,909 kg).
- Zinc plated to reduce corrosion and maintenance.
- Proximity sensors - maintenance free.
- Low Profile design - (12" above grade - 305 mm).

Control Station Communications Package

With the introduction of the Blue Genius™ Touch Controls, the XDS series dock leveler incorporates the added safety of a 24 volt control panel. The advanced Micro-processor based controls provide trouble free wiring and simplified board level trouble shooting thanks to the printed circuit board technology. The Blue Genius™ Touch Controls allow for real time onboard diagnostics and communications within the unit, featuring a user-friendly, multi-language LCD screen, providing easy to understand instructions for operation.

What to Ask When Considering A Dock Leveler With a Lip Barrier?

The Blue Giant XDS series offers a superior alternative with many more advantages over traditional lip barrier dock levelers. Before you consider a dock leveler with a safety barrier, be well informed and ask questions before making your decision. The XDS, what you want, where you want it, where you need it most.

- Is the dock leveler lip acting as the roll-off barrier? Why subject the dock leveler lip to any impact damage causing shipping and possible production downtime?
- Is the barrier at the outside edge of the dock? Is there no margin for safety to prevent falling off the loading dock to the abyss of the loading dock drive?
- Does the roll-off barrier protect the overhead door when in a closed position?
- Can the roll-off barrier (lip) impede materials handling at cross-traffic position (end-loading)? Is there smooth transition for small wheels?
- If the roll-off barrier (lip) is damaged, what is required to bring the dock leveler back to service? How long will that take? What is the downtime cost to the client?
- What is the lip replacement cost? Is it \$1,000? Is it \$2,000? Is it \$5,000? Or even more?
- Request a formal quote for repair.

Safety Features

XDS-2000 XDS-3000 XDS-4000 Series

- Control station with large stop button for added safety.
- Keypad override with light warning signal for ground-level hand bombing applications.
- Safety maintenance strut on dock leveler.
- Full operating range toe guards with safety striping on dock leveler for maximum operator safety.
- Hydraulic (velocity fuse) fall-safe system to prevent platform free-fall.
- UL/CSA approved motor and controls.
- Dual purpose lip keepers for both cross traffic support and automatic night locks to prevent building access through the leveler.
- Bumpers to protect the building wall.
- Traffic lights package.

XDS-3000 XDS-4000 Series

- Vehicle restraint interlock to prevent release of restraint until dock returned to stored position.
- Keypad operated restraint override that allows leveler to be used in instances where no rear impact guard is present (inside LED lights flash yellow, outside LED lights remain red).
- Dock leveler interlock to prevent cycle of dock leveler until vehicle restraint arm is in position.
- Traffic lights package.
